Education

Seshadri Rao Gudlavalleru Engineering College, Gudlavalleru

Oct 2022 – May 2026

B.Tech in Artificial Intelligence & Data Science

Skills

- **Programming Languages:** Java, Python
- **Core CS:** Object-Oriented Programming (OOP), Data Structures, Algorithms
- **Backend:** Spring Boot, Django, REST APIs
- **Frontend:** React.js, HTML, CSS, JavaScript
- **Databases:** MySQL, PostgreSQL, SQL
- **Tools:** Git, GitHub, VS Code

Experience

Java Intern – Infosys Springboard

Feb 2026 – Apr 2026

- Developed a full-stack Bank Grievance & Feedback Management System using Java and Spring Boot.
- Designed and implemented RESTful APIs for complaint registration and status tracking.
- Applied Object-Oriented Programming and MVC architecture to build scalable backend services.
- Integrated frontend and backend modules to enable seamless data communication.

Junior Frontend Intern – Vinti Web Solutions

Feb 2026 – May 2026

- Developed responsive ERP modules using React.js, JavaScript, and Tailwind CSS.
- Built reusable UI components for enterprise software applications.
- Integrated frontend components with REST APIs for seamless backend communication.
- Debugged UI issues and optimized application performance and responsiveness.

Projects

E-commerce Shopping

GitHub Repository

- Developed a console-based e-commerce application using Core Java and Object-Oriented Programming principles.
- Implemented product catalog, shopping cart, order management, and billing functionalities.
- Utilized Java Collections Framework for efficient product and customer data management.
- Applied encapsulation, inheritance, polymorphism, and exception handling to build a modular and maintainable application.

Bank Grievance & Feedback Management System

GitHub Repository

- Developed a full-stack Bank Grievance & Feedback Management System using Java, Spring Boot, MySQL, and REST APIs.
- Designed and implemented RESTful APIs for complaint registration, status tracking, and feedback management.
- Applied Object-Oriented Programming, Spring Data JPA, and MVC architecture to build scalable backend services.
- Integrated frontend and backend modules to enable secure data flow and efficient user interactions.

Playto Payout Engine

GitHub Repository

- Developed a scalable payout processing system using Python, Django, PostgreSQL, and REST APIs.
- Designed and implemented backend services for transaction processing, payout computation, and data validation.
- Built RESTful APIs to enable secure communication between frontend and backend components.
- Implemented asynchronous task processing using Celery to improve application performance and reliability.
